

GracklePDF - Fix Placement and BBoxes

All <Figures>, <Note>, <Formula>, and <Form> tags within a document require an accurate attribute of Placement. Assign Placements command scan and set the appropriate attribute of Block or Inline, dependant on the tag formatting. Additional attribute adjustments are also available for manual structuring of Block or Inline attributes to appropriate tags.

Adjust and move bounding boxes to highlight appropriately.

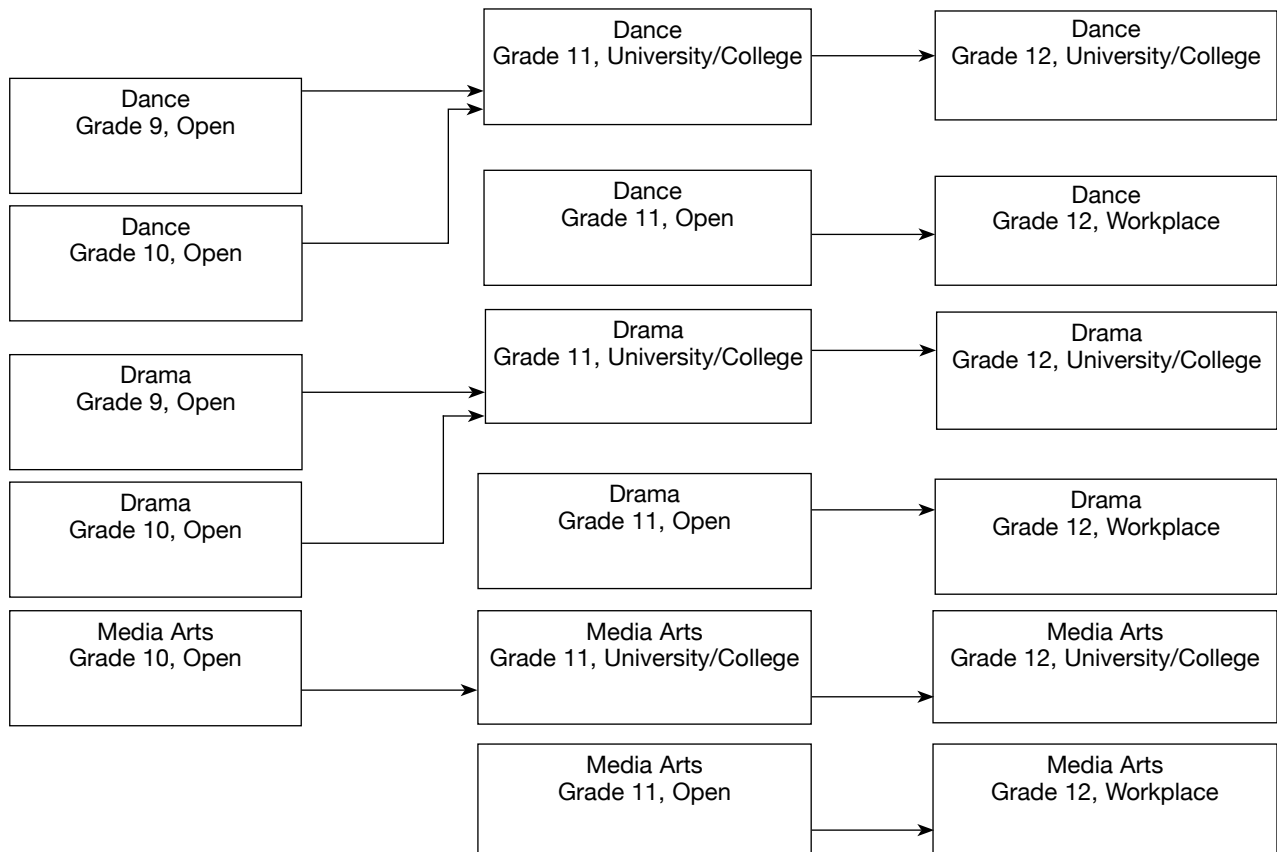

Figure sample: Age of evaluators participating in the survey
