This test cannot be auto-generated.

The PDF will need to be manually modified to add edit-type annotations to create:

- An annotation without any tag

- An annotation in an <Annot> tag

- An annotation, wrongly, in a <Span> tag

- An annotation, correctly, in a <Something> tag that is mapped to <Annot>

Checkpoint = AnnotationsInAnnotTag

** NOTE - This file is to be downloaded as ODT, edited in LibreOffice, and then exported to PDFUA manually. After that, edit in Acrobat and other editors to create the conditions.

Expect 3 passes and 2 fails (The second line has TWO annotations).
